Version 2025.6.0

1. All drawer fronts may now be globally changed to Standard at the Global Changes screen. When changing drawer fronts, simply press the red cancel button and all selected drawer fronts will be changed to Standard.
2. Under some rare circumstances, drawer box side heights were slightly off. This has been resolved.
3. Under some circumstances, Inside Vertical Dividers were positioned incorrectly along their depth. This has been resolved.
4. Change in meaning of Parameters 68, 69, and 60. Please see those variables that exist in defining the unfinished ends to see how the -100 and -200 rules operate.
5. Dados placed on replacement finished ends for cabinet backs were not being made. This has been corrected.
6. Grain matching may be setup via Panel Optimization Parameter #43 to grain match each section or each cabinet such as tall cabinets *split by height*.
7. CNC Smart Rules for drawer dividers are now supported in face frame mode.
8. Backs, like bottoms and tops, may now be extended out to the end of the Faceframe via the -200 rule.
9. A new option at the bottom of the Display Options screen of the Cutlist Editor allows face frame parts to be grouped together during sorting.
10. All **Woodwop users must select the ramping option** of their choice at the "Profile Cut and Ramping Options" category of the General CNC Options screen.
11. For those of you who have lost WordPad in **Windows 11**, you can now download it by pressing the "Find WordPad, MS Word, and Excel" button, located at the "File Locations and RazorGage" category from SETUP – MISCELLANEOUS SETTINGS – GENERAL OPTIONS.
